# Q&A

# How do I configure my ADTRAN Express XRT/3000 for an AT&T 5ESS point-to-point ISDN line that has no SPIDs?

**Q:** **How do I configure my ADTRAN Express XRT/3000 for an AT&T 5ESS point-to-point ISDN line that has no SPIDs?**

**A:** When using an AT&T 5ESS point-to-point line, the telephone number for the line should be entered into the ISDN Phone Number 2 location of the Express XRT/3000. For AT&T 5ESS point-to-point lines, incoming voice calls are routed to POTS port 2 to allow use of either a modem or a telephone. Service to POTS port 1 is not available when using an AT&T 5ESS point-to-point line.
