ADTRAN MSP 2.2.0 Release Notes

Release Notes	Release Date: June 30, 2010	Notes Revision: June 30, 2010

New Features	Overview
MSP GUI Legal Banner Display	• This feature allows the user to program a text banner that will be displayed on the login screen (both GUI & Command Line).
AAA For MSP Login	• Add support for RADIUS authentication for both the GUI and Command line interfaces.
Run jobs on saved filters	• This feature allows jobs to work on saved filters just as they have on labels in the past.

Resolved Issues

These are issues that have been resolved since previous releases

- Unable to login to the web interface of the server due to incorrect license info.
- Selecting a device from the dashboard could cause a blank device page to appear.
- Unable to delete last firmware image for a device group
- Pie chart on New Devices Details does not display correctly.
- Pre-install configuration job will fail if no "startup-config" exists on a target device's flash memory.
- User Interface does not show an error when Adobe Flash is not installed.

Errata

These are issues that were reported from the field or discovered during internal testing but were unresolved at the time of release.

- Cannot connect via HTTPS from Internet Explorer 8.
- A sysLocation value longer than 64 characters reported by a device results in no device update in the database.
- User Interface does not show an error when Adobe Flash is not installed.
- Units that only have enough flash for one firmware image will show device alerts for a missing secondary image
- Cannot upload firmware to MSP server when logged in via HTTPS
- GUI browser will lock up when viewing VQM statistics on device page when more than 2000 calls are present within a 24 hour period
- Cannot delete a device that has a restore job associated with it
