

## Q&A

### Can I use a Windows XP VPN client to tunnel into a Netvanta Product?

---

**Q:** Can I use a Windows VPN client to tunnel into a Netvanta product with the Enhanced Feature Pack (EFP) VPN firmware?

**A:** No, the Windows VPN client usually supports [Layer 2 Tunneling Protocol \(L2TP\)](#). This tunneling protocol is not compatible with [Internet Protocol Security \(IPSEC\)](#) tunneling, which is supported in Netvanta clients and hardware appliances with Enhanced Feature Pack (EFP). The NetVanta products only interoperate with standards-based IPsec VPN clients or hardware devices.
