

## Q&A

### **Can I install a 1st generation Controller Card into a second generation Smart 16/16e shelf?**

---

**Q:**

**Can I install a 1st generation Controller Card into a second generation Smart 16/16e shelf?**

**A:**

Controller Cards are compatible with first and second generation Smart 16/16e shelves. Since a replacement Controller Card is bundled with a Rear Power Interface Card, careful consideration must be made to properly match the rear power options with the capabilities of the chassis. Single Power Rear Interface Cards (AC & DC) operate well in first or second generation shelves. Dual Power Rear Interface Cards (AC & DC) are only operable in second generation Smart 16/16e shelves.
