ADTRAN

Q&A

Can the TSU U-BRITE module terminate a BRI being transported over a T1 from my T1 provider?

Q: Can the TSU U-BRITE module terminate a BRI being transported over a T1 from my T1 provider?

A: If it the T1 is configured as a standard RBS T1, no. In order for the UBR1TE to be able to provide BRI ISDN, the telco must match your BRI signaling in the T1 going to the Central Office switch. The UBR1TE is typically used on pt-to-pt applications with ADTRAN gear on both sides.
